2 Parameter remarks

| Nr. | Remark |
|-----|--|
| 1 | Defrost is not performed twice in case safety switches of mc or evaporator are not ok. |
| 2 | The period of each cycle includes on-time + off-time, that is the overall duration of the cycle. |
| 3 | Following defrost cycles will be aligned to the end of forced one. |
| 4 | Add 100 to FPt parameter to enable the outer defrost drive on INP-4. The defrost is initiated by INP-4 closure; after defrost and until INP-4 is closed, the instrument does not leave the dripping mode, to coordinate with eventual other instruments. |
| 5 | In case of hot gas defrost, both IA2 and IA3 must reach Ftt. |
| 6 | When MLH<MLL, there is a delay of 10*(MLL-MLH) seconds on Ip switch. Eventual pumpdown restart is over MLH+1 bar. |
| 7 | Fixed time 120 s and manual reset. |
| 8 | When activated, pump down mode forces compressor continuous run, switched off only by low pressure limit. |
| 9 | Forced refrigeration is disabled when room temperature is under LFL, forced heating is disabled over LFH. |
| 10 | When speed regulation is off the fan is operated on-off. |
| 11 | Caution! Speed regulation can cause fan fault or electronic board fault. Low and average minimum speed can increase the risk. |
| 12 | During the first 10 seconds of speed regulation, the n1L is replaced by (n1H+n1L)/2. |
| 13 | No action if the light is switched on from inside the room. |
| 14 | When off, the refrigeration solenoid is steadily on during cooling, as long as overheating is higher then vtL or b3A is off. |
| 15 | Caution! Low overheating causes liquid return and compressor damage. |
| 16 | Caution! Short duty cycle reduces valve life. |
| 17 | Caution! Low overheating causes liquid return and compressor damage. |
| 18 | Caution! High adaptation speed causes swing in the suction line and damage to the compressor. |
| 19 | The low temperature differential is fixed, and alarm status stops at 0.2 °C above the set point. |
| 20 | The high temperature differential is fixed, and alarm status stops at 0.2 °C under the set point. |
| 21 | Passing from stand-by to on and at power on, there is a 5 second delay spent in a virtual stand-by. |
| 22 | The minus sign on display ("-") signals that output is going to start after a delay. |

3 Alarm list

| Display | Alarm | |
|---------|------------------|--|
| A01 | low temperature | Low temperature limit has been reached. |
| A02 | high temperature | High temperature limit has been reached. |
| A03 | mc alarm | Pressure switch, thermistors, or any other compressor safety device has disconnected. |
| A04 | evaporator alarm | Evaporator thermal relay, or other evaporator safety device has disconnected. |
| A05 | defrost alarm | defrost safety thermostat, or any other defrost safety device has disconnected. |
| A06 | door open | Time limit for door opening has been reached. |
| A07 | mc phase | Compressor overload/thermal relay disconnected, or missing mains phase - manual reset. |
| A08 | low temp stop | Low temperature limit for full stop has been reached - full system stop - manual reset. |
| A09 | high temp stop | High temperature limit for full stop has been reached - full system stop - manual reset. |
| A10 | oil pressure | Oil differential pressure remained under minimum value for 120 seconds - manual reset. |
| A11 | low humidity | Low humidity limit has been reached |
| A12 | high humidity | High humidity limit has been reached. |
| A13 | low humid stop | Low humidity limit for full stop has been reached - full system stop - manual reset. |
| A14 | high humid stop | High humidity limit for full stop has been reached - full system stop - manual reset. |

4 Slave alarm list

| Display | Alarm | |
|---------|--------------|---|
| A96 | slave EEPROM | Failed write operation onto the slave EEPROM. |
| A97 | out of range | The slave address EdS might be out of the master range, the latter going from 1 to PdS. |
| A98 | no link | The slave does not receive any message from the master. |
| A99 | lost link | The slave lost the communication with the master. |

5 Button list

| Push button | Function |
|-------------------------|---|
| B1 esc - silence - skip | Exit without saving from any menu - alarm buzzer silence - skip compressor delay. |
| B2 up | Up navigation in the menu. |
| B3 on/stand-by - pause | Toggle between on and stand-by - toggle evaporator fan stop. |
| B4 left - light | Left navigation in the menu - switch the light on and off. |
| B5 down - defrost | Down navigation in the menu - force immediate defrost. |
| B6 right - menu - set | Right navigation in the menu - display and modify the set point - enter menu. |

6 Led list

| Led | Function |
|--------------------|--|
| L1 compressor | On during compressor run - blinking slowly during activation delay and pumpdown. |
| L2 evaporator | On during evaporator run - blinking slowly during activation delay and pumpdown. |
| L3 defrost-hum-deh | On during defrost and humidification - blinking slowly during dripping and dehumidification. |
| L4 air renew | On during air renew. |
| L5 heating | On during heating. |
| L6 unused | Unused in this application. |
| L7 light | On when lighting is on - blinking slowly during deactivation delay. |

7 Soft command list

Soft command Function

8 How to ...

| How to ... | Function |
|----------------------------------|--|
| Switch between on and stand-by. | Keep pressed B3 button, to activate and deactivate stand-by. In stand-by every output is disabled except light, leds from L1 to L6 blink, timers continue to count. |
| Stop or restart evaporator fans. | Press shortly the B3 button. When the evaporator fans are stopped, the display blinks. |
| Program the menu. | Keep pressed B6 to enter the menu. Navigate up and down with B2 and B5. Select the submenu by B6. Change the parameter by B2 and B5, press B6 to confirm, or B4 to go back without saving. The changes will have effect after the exit from programming pressing B4 repeatedly. Press B1 to exit immediately without saving any parameter. |
| Show or change temperature set. | Press shortly B6 - the display shows the current set point - change it by B2 and B5, and confirm it by B6. As alternative, enter the menu program as explained above, modify the parameter <code>_t0</code> , then confirm it. |
| Force an air renew. | Keep pressed B2. |
| Force a defrost. | Keep pressed B5. |

9 Shortcut list

| Buttons to press | Shortcut description - keep pressed 5 seconds |
|------------------|---|
| B5 | Force an immediate defrost. |
| B2 | Force an immediate air renew. |
